

ZNC Mibbit Configuration

First of all, make sure a supporter from **BdG** provided you with the necessary information and created a ZNC for you. Otherwise, make sure you get it!

You need a mibbit account to be able to save servers, since ZNC is a server we are going to do that first. Go to www.mibbit.com and create an account.

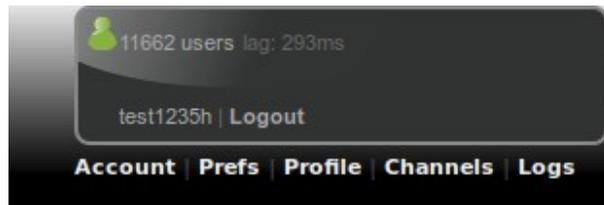

The screenshot shows the Mibbit website's account creation page. At the top left is the Mibbit logo and 'Mibbit Chat Network'. On the top right is a search bar with the text 'Search for places to chat' and 'e.g. games' entered, with 'Log In' and 'Search' buttons. The main content area is green and titled 'Create account'. It contains three input fields: 'EMail', 'Username (4-16 characters)', and 'Password'. Below the password field is a link to 'Terms of Service'. A 'Free Sign Up' button is at the bottom left. To the right of the form, under the heading 'Completely free account', is a list of features: 'Store preferences and favorite channels', 'Keep channel and PM histories', 'Secure access with SSL support', 'Configure aliases for common commands', 'Get access to filters to replace words you send/receive', and 'Configure colors, skins, smileys and sounds'. At the bottom of the page is a dark grey bar with the text 'Would you like Mibbit chat on your website? Click here for the Widget.'

Fill in your **email, username & password**. Make sure you write your password correctly. They are not really secure in registering accounts so no confirm mail or link is send. After registering mibbit takes you to the following page;

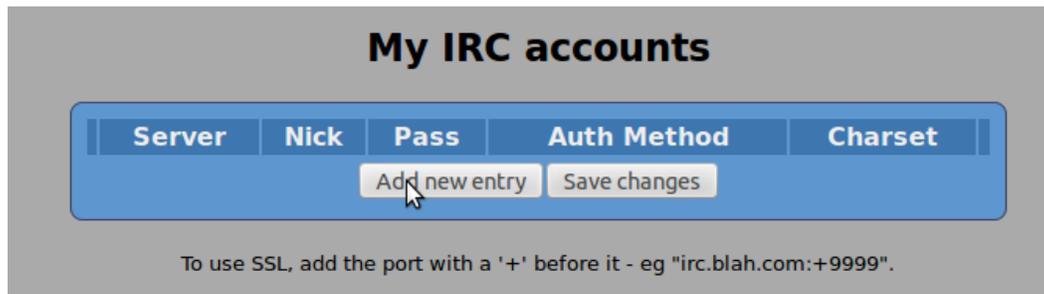

The screenshot shows the Mibbit website's success page. The background is green. On the left, the word 'Success!' is written in large white letters. Below it, the text reads 'Congratulations, your account has been created.' To the right is a large white checkmark. Below the checkmark, the text says 'You can now go straight to Chat' with 'Chat' in a red button. Underneath, there are links for 'Browse channels' and 'Top trending'. At the bottom of the page is a dark grey bar with the text 'Would you like Mibbit chat on your website? Click here for the Widget.'

Click on “Chat” and you will be redirected to the main screen, at the top right of the website a small menu can be find which include “Account”, “Prefs”, “Profile”, “Channels”, “Logs”.

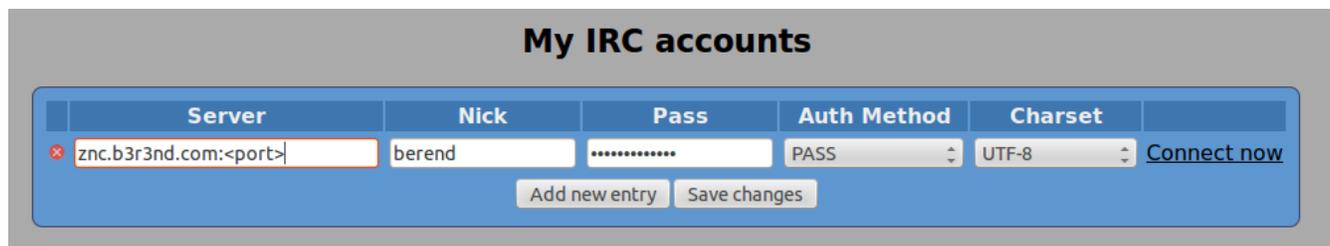

Click on “Account”, and you enter a screen with various settings, ignore them and go to “My IRC account” at the bottom of the page. Click on “add new entry” to add a new server.

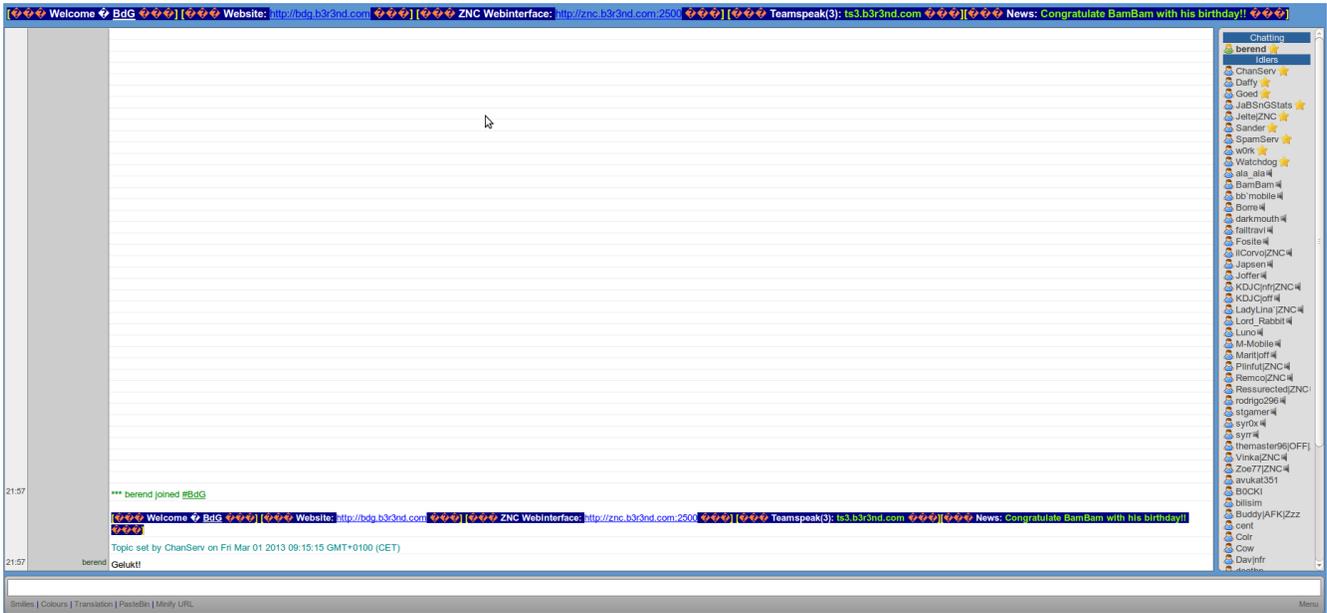

You will see some fields appear which you should fill in with the following data:

- **Server** → *znc.b3r3nd.com:<port>* (Port will be giving by the supporter, without <>)
- **Nick** → *Nickname*
- **Pass** → *This field will be given by the supporter.*
- **Auth Method** → *Pass*
- **Charset** → *UTF-8*

Now, if that is done save it by clicking “Save changes”. Then hit “connect now”. **If** you set up everything correctly you should be logged in to your ZNC now. You should see a screen familiar to the one shown bellow.

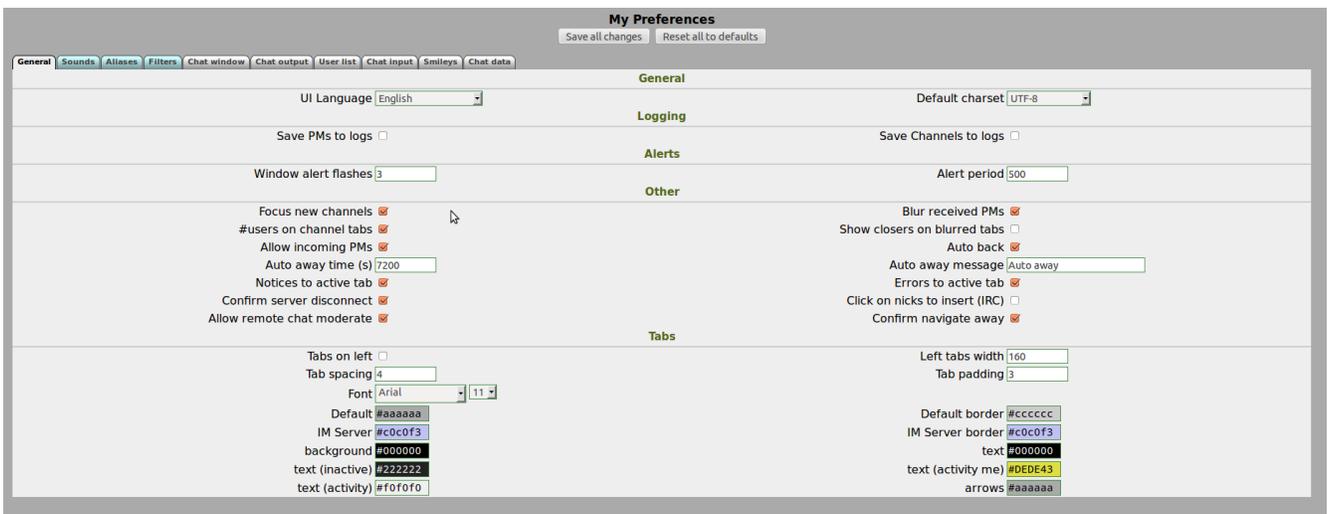

This means your ZNC works, the server is saved in your account and you can use our ZNC in mibbit from now on!

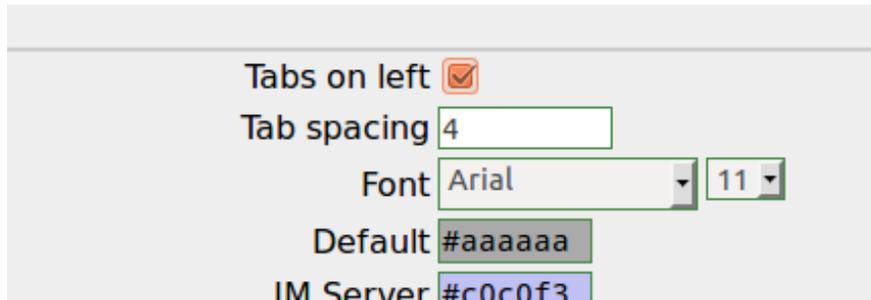

Change Tabs

If you use mibbit the way it is configured for you, you'll find out channels are shown above your chat window. Which is quite unhandy if you join more channels then the width of your screen can take. You could miss messages, and queries.

If you navigate back to your account preferences (“Prefs” in the menu), you'll see a screen like this;

At the left corner you can turn the “Tabs On left” setting on.

When you save it, mibbit automatically refreshes the screen (without disconnecting) and the tabs will be shown on the left from now on!

I might add more settings, more explanations and more pictures soon. For now you know how to connect which is the major goal of this guide. Questions and suggestions are always welcome!

Regards, berend
